RILSAN®
FINE POWDERS

Rilsan® coating resistance as a function of temperature

Chemical Resistance

In general, Rilsan® coatings have good resistance to inorganic salts, alkalis, most solvents, and organic acids. Greater caution must be observed in applications involving inorganic acids, phenols and certain chlorinated solvents. In such cases, please contact Arkema technical staff for assessment, specifying the practical problem involved: e.g nature of metal to be protected and the temperature and chemical composition of the liquid.
